

2020 & 2021 Emissions

	Average American Consumer	Employee Workdays	Production workdays on location	Travel miles (21Mpg/33.7KMpg)	Total
		55	0	425 Miles	
Emissions total	16.6 mt/co2/year 0.0456 mt/co2/day	2.5 mt/co2		0.94 mt/co2	3.44 mt/co2

Purchased 4/8/22
Average price of 1 mt/co2 = 14.6

We have changed how we calculate our emissions to make things easier and more transparent. Since we do not have a centralized office or location, we are now calculating our employees footprints as if they are an [average](#) American consumer releasing 16.6mt/co2 per year on workdays, and we are counting production days as five times that. We also calculate [transportation](#) separately as some projects require significant travel. We believe this combination of offsets are sufficient to offset our carbon footprint and then some, making us officially a carbon negative organization.
